

MIP HEADSINK™ #326 4/99

#3009 MIP Headsink™ for OS, .12R and Z
 #3037 MIP Headsink™ for OS, .12CV (gray)

MIP Headsink™s are designed for 1/10th scale off-road racing. We have focused our full attention on building the best products for your racing. Burning as high as 20% nitro MIP developed a Headsink™ technology that performs under all 1/10th off-road conditions. It uses the included #8 McCoy plug, along with our race winning head design. Unlike all other heads, the MIP Headsink™ comes "predecked" and uses only the one provided shim. No more Head shimming or plug problems.

TIPS:

1. It is always best to bolt the MIP Headsink™ on a cold engine.
2. Use the MIP snug and cross head torque method to bolt your MIP Headsink™ on. First snug all four head bolts as evenly as possible. Next, tighten all four head bolts by tightening one and then the one across from it until all four are completely tight.

Parts List

#3009	MIP .12R & Z Headsink with plug	24.95
#3037	MIP .12CV Headsink with plug (gray)	29.95
#3008	#8 McCoy Plug	4.95
